

the last receiver of each mix, 5 Msps (205 μ s period)

slow receivers, mix 'knee' (410 μ s)

box = 25th-75th percentile, line = median, dot = mean, whiskers = min-max without whole-process stalls (all receivers > 5 $\times$ their median within 2 ms), x = max with them; dotted = the receiver's batch period (its deadline); batches of all repeats pooled
